

ABSTRACT OF THE DISCLOSURE

An image forming apparatus and a control method for the apparatus are disclosed. In this image forming apparatus which has a printing unit selectively using a
5 desired one of a plurality of types of ink cartridges and can receive monochromatic and color facsimile images, appropriate ink remaining amount detection or appropriate received facsimile image printing control can be performed in accordance with the type of received image and the type
10 of loaded cartridge. In receiving/printing monochromatic and color images, a received image is discriminated as a color or monochromatic image, and the type of cartridge currently loaded into an ink-jet printing unit capable of performing printing operation by selecting one of a
15 plurality of printing capabilities is discriminated. In accordance with these discrimination results, control is performed to automatically print the received image using the printing unit or stored it in an image memory or the like.
